

## **Creation of Scripts in Indigenous Language Learning: The Present Scenario of Arunachal Pradesh**

**Bishakha Das**

Independent Scholar

bishakhasarma97@gmail.com

### **Abstract**

Indigenous languages are facing peril of disappearance. The indigenous knowledge system is stored in the oral literature for devoid of scripts. There is a general consensus among the speakers to introduce scripts to achieve indigenous literacy. In this present context the unit of study is Arunachal Pradesh. Each district bears a different linguistic picture – some are inhabited by similar linguistic groups with dialectal variations, others share the space with varied tongues. The state is home to approx. 32 -34 scheduled languages of broader Tibeto-Burman family. Three scripts are used in the respective regions of the state – Tai-Khamti, Wancho, and Bhoti/ classical Tibetan; the other communities write in modified Roman script. There exist many unwritten languages. English is the official language; Hindi and Assamese are the lingua franca of the state.

The present study focuses on the situation where a part of population of native speakers are conscious of preserving their tongue by writing their literature. The Christian missionaries promote mother tongue languages by printing hymns and gospels in the mother tongues. However, the presence of Christian missionaries does not necessarily help to make primers for school curriculum.

The essential learning tool utilized by the native speakers is creation of scripts. Most communities use the modified form of Roman script to write primers, as in, Galo (Galoo Ennam) Nyishi, Singpho, Lisu, Hrusso, etc. Wancho script is used in parallel with Wancho written in Roman script.

The paper elaborates on the problems faced by native speakers in designing the orthography; the conflicting views on scripts by the different groups of a community; the contestation regarding the appropriateness of the script; and how far scripts made learning better.

The languages mentioned in the study are Tai Khamti, Nyishi, Wancho, Galo, Mishmi, Lisu, Hrusso and Bhoti.

**Keywords:** scripts, alphabet, Tai Khamti, Nyishi, Wancho, Galo, Mishmi, Lisu, Hrusso and Bhoti

## Introduction

Many Indigenous languages are suffering from their peril of disappearance. The predominance and prestige lie with the official or state languages. There is a general consensus among the speakers to introduce scripts to achieve indigenous literacy. The present study focuses on the situation where a small population of native speakers are conscious of preserving or revitalizing their language by writing on their literature. Scripts play an important role in assigning prestige to their mother tongue. The study explores the creation of script as a language learning method and consequently, how far they are successful in the same. What is the present scenario of the mother tongue languages of the state?

The unit of study is Arunachal Pradesh, the largest of the seven sister states of North-East India, which is bounded by Bhutan in the west, Tibet in the north, Burma (Myanmar) in the east; and the Indian states of Assam and Nagaland in the south. The state is carved into 25 districts. Each district bears a different linguistic picture – some districts are inhabited by similar linguistic groups with dialectal variations, others share the space with varied tongues. The state is home to variegated tongues of the broader Tibeto-Burman family comprising of 32 -34 languages. In the state, three communities have scripts of unique characters – Tai-Khamti (*Lik Tai*), Wancho, and Bhoti/Classical Tibetan; the other communities write in modified Roman script. There still exists some unwritten languages. English is the official language, and Hindi and Assamese are the *lingua franca* of the state.

The essential learning tool utilized by the native speakers to conserve their mother tongue is creation of script. Most communities use the modified form of Roman script to create their orthography and primers, as in, Galo (Galoo Ennam) Nyishi, Singpho, Lisu, Hrusso, Mishmi, Adi etc.

In communities where Christianity exists, gospels, hymns and the Holy Bible are printed in many mother tongue languages. Hence, the native speakers opine that it is the Church which taught them to preserve their dialect and language. For, they preach and pray in the language they understand for their peace, harmony, health and security. This is the case with most indigenous languages of Arunachal Pradesh, for instance, Nyishi, Nocte, Tutsa, Hrusso, Apatani, Tagin, Adi, etc. Each community has gospels and hymns printed in their language using modified Roman script. However, the presence of Christian missionaries does not necessarily help to make primers for school curriculum.

The communities of scheduled languages are capable to circulate their written language in the form of primers. The government considers these languages as the third language to be taught in classes VI, VII, VIII in their populated habitats of the state. The ideology and power issue play a role in the inclusion of a language into the school curriculum.

## Focus of the study

The paper elaborates on the problems faced by native speakers in designing the orthography; the conflicting views on scripts by the different groups of a community; the contestation regarding the appropriateness of the script; and how far scripts made learning better. The paper provides illustrations of scripts by exhibiting the Consonant and Vowel charts of some languages of the state.

The present study will elaborate the case of few communities in detail. The written literature or scripts of the following indigenous languages are of varied nature as gathered from the native speakers of Arunachal Pradesh:

- 2.1. Tai Khamti
- 2.2 Nyishi
- 2.3 Wancho
- 2.4 Hrusso
- 2.5 Lisu
- 2.6 Galo
- 2.7 Mishmi
- 2.8 Bhoti

## Creation of Scripts in Indigenous languages

This section discusses on the development of script, the written materials available and the illustration of scripts. Most information is collected through discussion with the native speakers of the respective communities of Arunachal Pradesh.

### Tai Khamti

The communities bordering Assam show fluency in Assamese, and the most affected are Tai in India. While the other Tai varieties scattered in Assam generally speaks Assamese, Tai Khamti has retained their tongue appreciably (for, they are concentrated in Namsai district of the state). Tais show concern for their tongues; they seek for revival. They are equipped with a script of their own. Tai Ahom is preserved in the historical chronicles and manuscripts. Khamti has developed and improved the old system of Tai script. There are two Tai-Khamti scripts devised by two native scholars (Chow Khok Manpung and Chow Kalingna Manno).

Chow Khok Manpung's New Tai Reader I, II, III (First published 1993) is published by the Tai Literature Committee, Chongkham, and approved by The Director of Education, Govt. of Arunachal Pradesh. Chow Manpung has included additional alphabets in his script (the voiced sounds and voiced aspirates like g, gh, b, bh, j, jh, d, dh which do not exist in the Tai-Khamti inventory of sounds) in order to facilitate writing the borrowed words from particularly Assamese and English. He has graphically explained the inventory of tones in his Tai Reader and devised

tone symbols for the script (Inventory of Tone marks and Tone symbols in Khamti is exhibited in Table 1.3).

Chow Mannoï has retained most features of the old Tai script with some changes in the length distinctions and tone markings. The script is known as Lik Tai. Chow Mannoï’s Tai Language Primars is published in April 2010, from Kongmukham (The Golden Pagoda), Ta-Kongmu, Chongkham. Chow Mannoï and Chow Chatiya Mounkang again revised the script and published Tai Primers in 2018 which was sponsored by the Department of Education, Govt. of Arunachal Pradesh; and published by Tai Khamti Heritage and Literary Society (TKHLS) in collaboration with Tai Khamti Singpho Council (TKSC) These readers are used in the schools of Namsai district presently.

Invitation letters or religious agendas are written in Lik tai. News in Tai (kha<sup>3</sup>-kham<sup>5</sup> tai<sup>5</sup>) are also broadcasted. Tai Phake and Tai Aiton are still using the old scripts and they are presently working on upgradation of the script. Their written literature finds space in monasteries.

The script of Chow Khouk Manpung (1993):

Phonetic Transcription	Khamti Script	Phonetic Transcription	Khamti Script

## Nyishi

Nyishi is the largest ethnic group of the state. Nyishi devised their orthography from Roman script. After several revision of their script, they accomplished their primers ‘Nyishi Agam Kitap’ for grade V to VII for this academic session. The creation of orthography has been challenging for the native speakers. The Baptist church devised an orthography based on Roman script in 1972 with inclusion of lamda, pie (and prior to that they used Assamese script). The language consists of more than five vowels; the extra vowels are marked with consonants v and w. and this pose problems for consonantal words like *uwal* ‘exclamatory i.e., alas’, *wage* ‘title’ *puwak* ‘crow’; *vebralang* ‘kind of fish’, etc. Mr. Taku Tayu Stephen in his Primer altered the letters v and w, as  $w \rightarrow \acute{e}$  and  $v \rightarrow ey$ , as for instance *pey* ‘cut/slice’; *éké* [ükü] ‘maternal uncle, *émé* [ümü] ‘feather’. Catholic Church devised the orthography in 1990 which was different from Baptist church. The church people were incapable to distinguish the Nyishi inventory of sounds; hence there are still confusion raised on the appropriateness of the script. The writer of the recent Nyishi primer (unpublished), Mr. Taku altered the letter ‘a’ as devised by Catholic church to ‘e’, as for instance, *alang* ‘rock’  $\rightarrow$  *eleng* [ələng] ‘rock’. Mr Taku formulated the following 7 vowels:/a, e, é, ey, i, o, u/

A quarterly vernacular newspaper “Gumgu- rumru” was also published by Mr. Ha Tatu with Editor Taring Mama and Co-editor T. Taku Stephen. The Catholic Church also printed “Lehlam” (footprints) which was launched last year. In 1984, the Holy Bible and four books of Gospel “Tugun Pui”, “Tugun Gamle”, story of Abraham and Bible comics were printed to be read out in church. The Catholic Church also printed hymn book ‘Ao geda yab lamta’. There is another community Nyeder Namlo Community of DonyiPolo who also joined in the group that work on the written literature along with the Christian community.

Nyishi will be included as a vernacular in the school curriculum shortly.

## Wancho

Wanchos reside in Longdin and Tirap districts of Arunachal Pradesh. They are presently using two scripts – Roman script and Wancho script. Mr. Banwang Losu has recently developed Wancho script. The teachers are undergoing training of the new script in the headquarter Longdin. According to the native speakers, Primer books are printed and can be used in Wancho speaking belts which include Mon district in Nagaland and Myanmar. In addition, Mr. Losu created Wancho Tutorial animation video with English subtitles. Wancho script is published in International Unicode standard, and hence it has a digital identity and can be used in the world over.

Illustration 3. (From left) Multilingual illustrations for Wancho words; Wancho alphabets

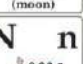

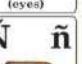

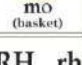

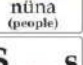

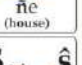

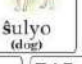

### Aka-Hrusso

Hrusso uses a modified Roman script but it is not yet included in the school curriculum. The published books are Children’s story book and Children’s learning book. Gospels and hymns are also printed in the same language. The alphabet chart of the Hrusso language is given as under:

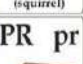

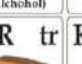

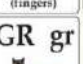

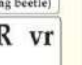

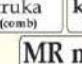

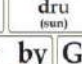

## Ĝusso Ĝitrü

**Lisu**

Lisu or Yobin comprises a small population residing in Vijoyanagar circle of Changlang district. Lisu uses the modified Roman script (Illustration 3) and is taught in church and home. The language is not yet included in the school curriculum. The Primers were published long back which are available in the Lisu community in north-west Thailand and Myanmar. These books are no longer printed, hence, there isn't any primers available presently. The most interesting fact is Lisu children can read and write in their mother tongue.

**Illustration 5.** (From left) Lisu book of parables; Dictionary

**Illustration 6.** Lisu alphabet chart

## Galo

Galo comprises a bigger population of Arunachal Pradesh next to Nyishi and Adi. The Galo Language Development Committee developed a modified Roman script for their inventory of alphabets in 2008 named as ‘Galoo Ennam’. The inventory of sounds consists of 7 vowels, 17 consonants and two tones (the low tone is marked). The state government has approved the script to be used in school curriculum, grades VI to VIII, in Galo dominated areas from academic session 2016<sup>1</sup>.

## VOWELS

<b>Galo</b>	A	I	U	E	O	W	V
	a	I	u	e	o	w	V

Illustration 7. Galo alphabet chart

## Mishmi

The Mishmi community may be categorized into three groups Idu, Digaru/Tawrã and Kaman/Miju. These mother tongue languages are using modified Roman script and printed their primers to be used in the school curriculum in their respective areas. The church has printed the Holy Bible, parables and hymns in all three Mishmi varieties. The following illustration is the primer printed by Tawrã Mishmi community.

**CHAPTER-2**

**VOWELS**

*The Tawrã dialect has 6 vowels, 3 nasal vowels and 26 consonants! Let us have a look at the sounds of Tawrã.*

1) **ORAL VOWELS**

ORAL VOWELS					
I	i	E	e	U	u
A	a	U	u	O	o

2) **NASAL VOWELS**

*It is a consonant sound produced through the nose.*

*Example: "wã" means "door", "gã" means "leg", "ngã" means "good", "brã" ...*

*In addition to the six oral vowel consonants, Tawrã contrasts one nasal vowel at each degree of backness: "ã, ẽ, õ". There is no height contrast in nasal vowels. The backness could be written as ã in order to observe orthographic consistency in phonological height. Example: "gã" = "gã", however, because it sounds like a nasalized high back vowel, it is transcribed "ŋ".*

NASAL VOWEL			
ã	ẽ	õ	ñ

	s	sh	H
Tsh		Q	
	tsh		q

Illustration 8. Tawra alphabet chart

## Bhoti

Certain communities in Arunachal Pradesh are followers of Tibetan Buddhism in West Kameng and Tawang districts. In such places, Classical Tibetan or Bhoti is included in the school curriculum for the Primary level i.e., grades I to VIII. Their religious books are printed in Bhoti; and their religious duties are also performed in Bhoti.

**Illustration 9.** Bhoti script sample in the Primer

## Summary & Conclusion

Introducing scripts for indigenous literacy has been a sincere endeavour of the Christian missionaries as well as numerous literary organizations. To mention a few – **Tai Khamti** Heritage and Literary Society (in collaboration with Tai Khamti Singpho Council), **Galo** Language Development Committee of the Galo Welfare Society, **Nyishi** Elite Society, (International) **Lisu** Literature Association, **Hrusso** Literature team, **Tawra** Language Development Committee, etc. In some of these literary societies<sup>2</sup>, linguists work hand in hand with the native speakers. Further, there was an establishment of the department of Karmik and Adhyatmik (Chos-Rig) Affairs

<sup>2</sup> Nyishi Elite Society (NES) constitutes a team of experts who are working on Nyishi book:

- Prof. NT Rikam (chairman)
- Prof. Mr Nabam Nakah Hina
- Prof. Tok Reena
- Prof. Lisa lomdak (Linguist)
- Mr Tarh Choya (member)
- Mr. T Stephen Taku
- Mr. Payi Dawe (member)

(Government of Arunachal Pradesh) in 2009 who worked for the preservation and enrichment of Buddhist culture. This department constituted an expert and drafting committee with the Central Institute of Himalayan Culture Studies (in Dahung, West Kameng) who published the Bhoti Language Text books for Class I to VIII.

The society's acceptance and contestation of the appropriateness of the scripts sometimes make the native speakers face the trouble of learning two scripts. It is also seen that two kinds of scripts for the same mother tongue are used in two different circles of the same district. This was the case of Tai Khamti. Presently, Mannoï & Mounkang formulated the old Tai script (named Lik Tai) to be in unison with the Tai in Myanmar and Thailand.

In most cases, the native speakers are not trained enough to build orthography for their mother tongue. Hence, in Nyishi all /e/ words are marked as *ey*, /ə/ words are marked with *e*. In certain communities, the native speakers face difficulty in marking tones. The church authorities are sometimes not competent enough to ascertain the inventory of sounds. This makes the community linger in the process of creation and utilization of scripts. However, presently, few communities are working on their scripts with Linguists and preparing better primers like Mishmis.

The communities like Lisu, Hrusso, Wancho languages are not yet included in the school curriculum. Some communities despite the creation of script like Lisu, Hrusso are not yet utilized in the schools; Nyishi primers are planned to be used in this academic session; Wancho teachers are undergoing training in new script.

Most of the mother tongue languages in Arunachal Pradesh are using modified Roman script. The former script of Wancho was Roman script and later Losu devised unique alphabets for the same.

The Christian missionary had given prestige and power to many mother tongues and hence initiated a foundation to the creation of script for indigenous literacy. Thus, literacy in Lisu takes place in church in the absence of its inclusion in school. In addition, the church performs its duties in mother tongue languages which makes the indigenous communities feel comfortable linguistically. A contrasting case is the Sherdukpen speakers & believers of Tibetan Buddhism, who find difficulty in comprehending while uttering the prayers in Bhoti.

Of approximate 34 major languages of the state, mention could be made of some languages only who devised scripts as a tool for language learning. There are however, few other linguistic communities who are still in the process of developing script for their mother tongues by using Roman script. Linguists and language developers should take steps in promoting the indigenous languages by devising scripts for these communities. The native speakers should be facilitated with linguistic training so as to make them capable to create scripts for their mother tongues.

## Acknowledgements

I am grateful to **Nyishi** speaker - Mr. Taku Tayu Stephen; **Tai Khamti** speakers - Chow Kalingna Mannoï & Chow Chatiya Mounkang; **Tawrã Mishmi** speakers - Johakso Manyu & Jabralum Chaitom; **Hrusso** speaker - Mareena Sangcho; **Lisu** speakers - Avia Ngwaza, Ngimada Yobin, Biyonu Yobin; **Sherdukpen** speakers - Bachandu Thungon, Khandu Thungon, D. K. Thondok; **Adi** speaker Taber Tamuk; **Wancho** speakers Gangdiap Gangsa, Banwang Losu and Galo speaker Ili Riba.

## A Brief Description of Dogri Morphology

Udita Sawhney  
udita8909@gmail.com

### Introduction

With around 2 million<sup>1</sup> speakers, Dogri is primarily spoken in the mountainous and sub-mountainous regions lying between Dhauladhar and Pir Panjal mountain ranges of North India. It belongs to the group of Western Pahari languages of Indo-Aryan language family and may have derived from Vedic Sanskrit<sup>2</sup>, though there is also a considerable influence of Persian on the present day Dogri. Native speakers classify Dogri into three major varieties based on the type of terrain where it is spoken: *Pahari Dogri* (higher altitudes), *Kanddi Dogri* (barren lowlands) and *Maidani Dogri* (relatively lower hills).

Morphologically, Dogri is a rich language and all three domains of morphology- inflectional, derivational and compound are significant in its structure. The major lexical word classes in Dogri are nouns, verbs, adjectives and adverbs. There also exist closed functional classes- pronouns, postpositions and numerals. In a sentence, nouns can function as subject, direct object, indirect object, subject compliments, object compliments or object of postposition. They get inflection for gender, number and case. Similarly, adjectives are inflected for gender, number and case. Pronouns also undergo declension but they take inflections only for number and case and not for gender.

Dogri is a head-final language (see 1). Similar to Hindi, the default word order is SOV where major constituents allow scrambling (see 2).

- (1) a. [e ʃel ka:r] ε  
this beautiful house Cop.PRES.SG  
'this house is beautiful'
- b. mer-a ka:r  
my-M.SG house.M  
Possessor Possessed noun  
'my house'

---

<sup>1</sup> Source: Ethnologue, 2001 census.

<sup>2</sup> There has not been any published work on the historical development of Dogri.

- (2) a. kuṛi=ne dʒagəṭ-e p<sup>h</sup>ull diṭ-a  
 girl=ERG boy-DAT flower.M.SG give-PERF.M.SG  
 ‘girl gave flower to the boy’
- b. kuṛi=ne p<sup>h</sup>ull diṭ-a dʒagəṭ-e  
 girl=ERG flower.M.SG give-PERF.M.SG boy-DAT  
 ‘girl gave flower to the boy’

Dogri is also a pro-drop language like Hindi though the drop is mostly contextual. It is essentially a fusional language where a single morpheme carries multiple grammatical information. For example in (2a.), aspect, gender and number agreement is reflected through a single morpheme /- a/ in /diṭ-a/.

### Word Formation

Derivation, compounding and reduplication are the most common word formation strategies in Dogri. Derivational processes include prefixation and suffixation. Most affixes attach to roots of different word classes and derive various word classes depending on the root to which they attach.

### Prefixation

A feature typical of Indo-Aryan languages, addition of a prefix to word roots in Dogri brings in change to the meaning of the word. Prefixation can trigger a change in category of the word class. Table 1.1 lists some of the common prefixes (this list is not exhaustive):

Table 1.1 *Prefixation in Dogri*

Morpheme	Root/Stem	Prefix Form
nə	lek ‘intelligent’	nəlek ‘stupid’
bəḍ	nā ‘name’	bəḍnā ‘notorious’
	ṭəmi:z ‘etiquette’	bəṭṭəmi:z ‘bad-mannered’
əv	guṇ ‘positive attributes’	əvguṇ ‘negative attributes’

### Suffixation

Suffixation is one of the most productive word formation processes in Dogri. Most of the affixation induces a change in the lexical category of the root form. For example, nouns can be derived from adjectives by the addition of the suffix /-i/ to the noun stem, e.g. kəməzor ‘weak’ + i = kəməzori ‘weakness.’ Some of the common suffixes are shown in Table 1.2.

Table 1.2 *Suffixation in Dogri*

Morpheme	Root/Stem	Prefix Form
əṭ	lik <sup>h</sup> ‘to write’	lik <sup>h</sup> əṭ ‘written record’
ən	mər ‘to die’	mərən ‘death’

aka	ləḍai ‘fight’ (n.)	ləḍaka ‘someone who keeps on picking fights with others’
okəl	pəḍai ‘study’ (n.)	pəḍokəl ‘nerd’

### Compounding

Compounding is another feature characteristic to Dogri. Following<sup>3</sup> compound constructions are common to Dogri, Hindi and Punjabi.

#### Copulative Compounds

- (3) a. pənpra ‘sister and brother’  
 b. t̪ajatai ‘paternal elder (to one’s father) uncle and aunt’

#### Superordinate Compounds

- (4) a. ətt̪h̪ pāḍ ‘hand’ ‘feet’ ‘body’  
 b. t̪āpən̪i ‘tea’ ‘water’ ‘refreshment’  
 c. ḍud̪h̪pətt̪i ‘milk’ ‘leaves’ ‘tea’

#### Modifier-Noun Compounds

- (5) a. bəl gəṭi ‘bullock’ ‘vehicle’ ‘bullock cart’  
 b. gəŋga d̪ʒəl ‘Ganges’ ‘water’ ‘water of Ganges’

### Reduplication

Reduplication, both complete and partial, is prominent in Dogri. Though there are some differences as to how these compounds are formed and their semantic range in each of these languages. An example of complete reduplication in Dogri would be bəkk<sup>h</sup>- bəkk<sup>h</sup> ‘different/various.’ The stem is [bək<sup>h</sup>ra] ‘separate (adj.)’ and while reduplicating, the /ra/ gets dropped. Other examples include

- (6)
- | Root/Stem                      | Reduplicated form                    |                       |
|--------------------------------|--------------------------------------|-----------------------|
| a. ronā ‘to cry’               | roi-roi                              | ‘having cried a lot’  |
| b. k <sup>h</sup> ana ‘to eat’ | k <sup>h</sup> ai- k <sup>h</sup> ai | ‘having eaten a lot’  |
| c. t̪arna ‘to walk’            | t̪urḍe-t̪urḍe                        | ‘having walked a lot’ |

Interestingly, the Hindi counter parts of the same roots denote a different meaning after reduplication. Examine the Hindi forms below:

- (7)
- | Root/Stem                      | Reduplicated form                        |                 |
|--------------------------------|--|-----------------|
| a. ronā ‘to cry’               | rot̪e-rot̪e                              | ‘while crying’  |
| b. k <sup>h</sup> ana ‘to eat’ | k <sup>h</sup> at̪e- k <sup>h</sup> at̪e | ‘while eating’  |
| c. t̪alna ‘to walk’            | t̪alt̪e-t̪alt̪e                          | ‘while walking’ |

<sup>3</sup> Kaul, O.N., 2008. *Modern Hindi Grammar*. Dunwoody Press.

Other examples of reduplicated words in Dogri are:

- |     |  |   |             |
|-----|--|---|-------------|
| (8) | Root/Stem  | Reduplicated form   |             |
|     | a. k <sup>h</sup> ittj <sup>h</sup> na ‘to snatch’ | k <sup>h</sup> ittj <sup>h</sup> o-k <sup>h</sup> ittj <sup>h</sup> | ‘confusion’ |
|     | b. marna ‘to beat someone up’                      | maro-mari   | ‘chaos’     |

Dogri also exhibits partial reduplication or echo formation. Examples include

- |     |                  |           |                      |
|-----|------------------|-----------|----------------------|
| (9) | a. ruṭi ‘food’   | ruṭi-juṭi | ‘food and food like’ |
|     | b. rona ‘to cry’ | rona-ṭona | ‘a (dramatic) scene’ |

## Word Categories

### Nouns

Nouns exhibit a two-way gender system of masculine and feminine, and a two-way number system of singular and plural. While the gender of animate nouns corresponds to the referent's gender (natural gender), gender designation in inanimate nouns is somewhat arbitrary but can be predicted on the basis of form in most cases (/–a/ endings imply masculine and /–i/ feminine gender in most cases; exceptions exist e.g. bərk<sup>h</sup>a ‘rain’ is feminine in spite of it having an /–a/ ending. Similarly paṇi ‘water’ is masculine even though it has /–i/ ending). Nouns also inflect for case- nominative and oblique. Nouns can be modified by numerals, quantifiers, adjectives, relative clauses and possessive pronouns.

Unlike Hindi, in Dogri, proper nouns inflect for oblique case:

- |      |          |                                    |  |
|------|----------|------------------------------------|--|
| (10) | a. Hindi | Ram=ko    paṇi    d̥o              |  |
|      |          | Ram=ACC    water    give-PRES      |  |
|      |          | ‘give water to Ram’                |  |
|      | b. Dogri | Ram-e    =gi    paṇi    d̥ei-oṭo   |  |
|      |          | Ram-OBL =ACC    water    give-PRES |  |
|      |          | ‘give water to Ram’                |  |

Interestingly, there is variation in how proper nouns inflect for oblique case based on their form. The marker /–e/ is only present if the noun is a closed syllable or ends with /–u/. Stem endings with /–a/ or /–i/ do not exhibit this marker.

- |      |                               |
|------|-------------------------------|
| (11) | a. Ram-e    paṇi    d̥ei-oṭo  |
|      | b. Raju-e    paṇi    d̥ei-oṭo |

- c. \*Rani-e pañi d̥eioṛo  
 Rani=gi pañi d̥eioṛo (correct form)
- d. \*Udita-e pañi d̥eioṛo  
 Udita=gi pañi d̥eioṛo (correct form)

### Verbs

Dogri verbs can be classified into intransitive, transitive and ditransitive, based on the number of arguments they take.

#### (12) Intransitive

kuṛi su-t̥i hi  
 girl sleep-PERF.F.SG Cop.PST  
 ‘the girl slept’

Few other examples include ṭurna ‘walk’, ṭorna ‘run’, ṭharna ‘shiver’, əssna ‘laugh,’ etc.

#### (13) Transitive

Ram=ne ruṭi k<sup>h</sup>a-d̥i  
 Ram=ERG food.F eat-PERF.F  
 ‘Ram ate food’

#### (14) Ditransitive

Ram=ne Rani=gi kəṭab d̥i-t̥i  
 Ram=ERG Rani=DAT book.F.SG give-PERF.F.SG  
 Ram gave book to Rani.

Transitive verbs can be converted to intransitive with the affixation of the suffix /-ot̥i/.

- (15) a. pañi pərot̥i gea Ram=ne pañi pə-  
 water fill happen-PERF Ram=ERG water.M fill-PERF.M  
 ‘water has filled’ ‘Ram filled water (in something)’
- b. kələm guat̥i d̥z̥a:g ŋe kələm guai ot̥-  
 pen lose go-FUT he pen.M.SG lose happen-PERF.M.SG  
 ‘pen will get lost’ ‘he lost pen’

The verb is also categorized as finite and non-finite. Finite verbs inflect for gender (masculine and feminine), number (singular and plural), person (1<sup>st</sup>, 2<sup>nd</sup> and 3<sup>rd</sup>) and tense (present, past and future).

### Adjectives

In Dogri, in terms of function, adjectives can either modify nouns or form adjectival predicates. As modifiers, adjectives precede the head nouns, and as predicates adjective can be both final and initial (16).

(16) a. e dʒagəʔ [ʃel ɛ]  
 this boy nice Cop.SG  
 ‘this boy is nice’

b. e dʒagəʔ [ɛ ʃel]  
 this boy Cop.SG nice  
 ‘this boy is nice’

Both a. and b. are allowed due to the free word order though b. also implies extra emphasis on the boy being good.

Only the class of adjectives that have stem endings /-a/ and /-i/ are declinable, and inflect for gender (masculine, feminine), number (singular, plural) and case (direct, oblique).

(17)	Dogri	a.	tʃəŋg-a	dʒagəʔ	tʃəŋg-e	dʒagəʔ
			good-MS	boy.M.SG	good-M.PL	boys.M.PL
		b.	tʃəŋg-i	kuʃi	tʃəŋg-iã	kuʃiã
			good-F.SG	girl.F.SG	good-F.PL	girls.F.PL

The genitive forms of pronouns also function as adjectives and get inflected for number, e.g. meriã gəllã ‘my talks’.

### Adverbs

Adverbs in Dogri are formed by either assigning case marker to adjectives or by reduplication of adjectival roots. In terms of position, they precede the verb.

(18) a. rəddʒie ruʃi kʰa  
 ‘eat heartily’

b. tʃəŋgi tʃali tʃəl  
 ‘walk properly’

c. ʃel-ʃel kʰao  
 ‘eat nicely’

In Dogri if an adverb ends with /-a/, it inflects for gender and number. This is in contrast to Hindi where adverbs are not inflected.

(19)	ram ʃim-a	tʃəl	rani ʃim-i	tʃəl	kuʃijō ʃim-e	tʃəl-o
	ram slow-M.SG	walk	rani slow-F.SG	walk	girls	slow-PL walk-PL
	‘Ram walk slowly’		‘Rani walk slowly’			‘girls walk slowly’

## Pronouns

### Nominative Case Pronouns

	Singular	Plural
1 <sup>st</sup> Person	ãu/mɛ	əss
2 <sup>nd</sup> Person	ɽɪ/ɽɪss	ɽɪss
3 <sup>rd</sup> Person	e (proximate)	
	o (distal)	

The 2<sup>nd</sup> Person singular pronoun /ɽɪss/ is a more polite form and implies respect for elderly whereas ɽɪ is usually used in informal conversations or when the person is younger and one knows them very well (like *vous* vs *tu* in French). Unlike Hindi, the 3<sup>rd</sup> Person nominative pronouns in Dogri do not exhibit number agreement with head nouns.

### Oblique Pronouns

	Singular	Plural
1 <sup>st</sup> Person	migi	əssẽ
2 <sup>nd</sup> Person	ɽɪgi/ɽɪssẽ	ɽɪssẽ
3 <sup>rd</sup> Person	issi	inẽ (proximate)
	ussi	unẽ (distal)

### Genitive Pronouns

	Singular	Plural
1 <sup>st</sup> Person	mera	saɽa
2 <sup>nd</sup> Person	ɽera/ɽundɽa	ɽundɽa/ɽaɽa
3 <sup>rd</sup> Person	era.M/eri.F	inɽe
	ora.M/ori.F	unɽe

### Introduction:

Way back in 1981, Mikhail Mikhailovich Bakhtin, a Russian philosopher, literary critic and scholar argued that “Language is not a neutral medium that passes freely and easily into the private property of the speaker’s intentions; it is populated – overpopulated with the intentions of others.” (Bakhtin 1981, cited in Duranti 2011, p. 28) It rather appropriates, expropriates, forces - both coercively and ideologically - to submit to one’s own intentions, beliefs and practices. This expression of force and coercion is loud and clear in Linguistic Anthropology, a sub-field of Cultural Anthropology “concerned with the place of language in its wider social and cultural context, and its role in forging and sustaining cultural practices and social structures.” (Foley 1997, p. 3) Linguistic anthropologists have used language in their work as a source for general study of 'culture'. The phrase ‘language is culture and culture is language’ is commonly used when discussion on the two takes place. Alfred L. Krober, an American cultural anthropologist has said that culture started with the advent of speech, and since then, the enrichment of one led to the development of the other. The communicative acts are the manifestation of culture with respect to a given society. Young children, in the process of learning their language, acquire culture simultaneously.

As an interdisciplinary field dedicated to the study of language as a cultural resource and speaking as a cultural practice, it draws theoretical and methodological persuasions from diverse fields,

approaches and schools of thought leading to considerable differences across generations of scholars. What is it that despite such considerable differences arising out of varying theoretical and methodological orientations, linguistic anthropologists continue to remain unanimous in their understanding of certain basic assumptions about language? Duranti finds an answer in Bakhtin. In fact, the insightful observation of Bakhtin prompted Duranti to argue that there are “some core ideas about a small set of essential properties of language”, which are “centered upon one basic assumption, namely, that *language is a non-neutral medium.*” (Duranti 2011, p. 29; emphasis in original) These are, according to him, shared across generations and schools of thought. Perhaps, it is this understanding that ‘language is a non-neutral medium’ guided Boas to believe that each language should be studied on its own terms rather than according to some pre-set categories (e.g., Latin or Greek).

Benjamin L. Whorf, a student of Edward Sapir, reinforced Boas’ belief when he said that nature should be dissected along lines laid down by our native languages. According to him, the real world was a result of the language habits of people, which appears different to each society, and no two languages are similar in such a way that they may represent one society. When linguistics in America was being pursued basically by scholars more committed to linguistic theory than to languages, apparently demonstrating devaluation of grammatical description *per se*, Sapir, Whorf and a host of other Anthropological linguists were arguing against the over-generalization of the theoretical linguistics. Their nature of opposition was premised on the assumption that these over-generalizations would obscure differences across languages. For Sapir and Whorf, documentation and detailed description of grammar of the language of Native Americans such as the Hopi were important because the indigenous groups view the world differently from those who spoke English. The perspective that is being shared here is what is called the Sapir-Whorf Hypothesis, which originated in the middle of the twentieth century. Language affects the thought process. This is termed as linguistic relativity.

### **Linguistic relativity and the Polynymous camel of Arabia:**

The natural and cultural world that camel inhabits in the land of desert makes an interesting case of linguistic relativity and the richness of language. The rich Arabic language, which provides an extensive list of 'signifiers' or referents to a single 'signified' or idea, has brought to light, the hundreds of names given to the 'ship of the desert' - The Camel.

Camels have been an important part of life in Saudi Arabia and throughout the Arabian Gulf. They are considered sources of pride for not just the breeders but also for all Arabs, who identify camel, symbolic of their heritage, life and economy. More importantly, in the 7th century AD, the camel was the main tool in the campaign in spreading Islam across areas of Asia, Africa, and Europe. The camel not only was the mount of the Arab Bedouin to launch their campaign, but it was also

the main animal in the herd and a major source of wealth and food. Without the almighty camel, the entire history of the Arabs would have been different.

Apart from serving as the beast of burden and providing meat, milk, wool and medicines, camel has a cultural significance also. They are gifts to brides and their families in marriage ceremonies. Also, in the wedding ceremony, the bride usually arrives at the groom's house seated on top of a camel, both decorated to mark joyfulness of the occasion. This importance justifies the umpteen labels that it has in the language.

This paper makes a modest attempt to present variety of words used for representing different types of camels arranged according to semantic fields (or lexemes). These semantic fields considered in this study include subject matter, such as colours, age, number, pregnancy, breeding, drinking water, milk production, strength, etc.

### Methodology:

The data for looking into different terms used for referring to camel have been collected from both written and spoken sources. For the written sources we have relied on old classic text titled *Kitab Al-Mukhassas* written by Ibn Sidah Abu al-Hassan Ali bin Ismail in 1898/1903. For the spoken data we relied on information provided by the native speakers of Arabic across the Arab world. Most of our informants belonged to the age group of 50 and above who volunteered to provide data to us based on what they could recall from their interaction with the parents and other elder members both within and outside the family. Owing to pandemic, we requested them to record the data and provide us online after proper authentication at their level.

### Presentation of data:

#### i. Terms of camel based on colors:

No.	Terms	Transcription	Meaning
1.	أشعل	/aʃʃæl/	Camel, that is white with a different tail color
2.	أمغر	/amyər/	Camel in which its face has a red color mixed with a pure whiteness
3.	جرشية	/dʒərʃi:jəh/	Red camel
4.	جالمه	/dʒalɪməh/	Black camel
5.	شقحاء	/ʃəqhaʔ/	Camel in which its blackness is mix of red, white
6.	سمحاء	/səmhəʔ/	Camel in which its color is mixed of black and red
7.	مغص	/məysʕ/	White camels
8.	وضحاء	/wədʕhaʔ/	White camel (female)

9.	اخضر	/aχdʕər/	Green (or greenish) camel
10.	احوى	/ ahwa/	Green camel mixed with black and yellow
11.	شهلاء	/ʃəhlaʔ/	Camels that are brown in color
12.	أكلف	/ akləf/	Very red camel mixed with little blackness
13.	أحسب	/ahsəb/	Black camel and in its blackness mixed with little red or white
14.	أسمر	/asmər/	Camel which seems to be white but it is not
15.	عيس	/ ʕais/	Camels which have white mixed with blonde hair
16.	غهيّب	/ ɣəhi:b/	Dark camel
17.	حمرة	/həmrəh/	Red camel
18.	ارمك	/armək/	Red camel mixed with black
19.	اورق	/aurəq/	Black camel mixed with little white
20.	أدم	/adəm/	Male camel, that is completely white
21.	عيس	/ʕei:s/	Male camel, that is white with blonde complexion
22.	عيساء	/ʕei:saʔ/	Female camel, that is white with blonde complexion
23.	أدماء	/admaʔ/	White female camel
24.	اوضح	/ audʕəh/	White male camel
25.	حمراء	/ həmraʔ/	Red and white camel
26.	شعلاء	/ʃəʕlaʔ/	Camels covered with red hair

ii. Terms of camel based on age:

No.	Terms	Transcription	Meaning
27.	لقي	/luqi:j/	A camel which is between two to three years old
28.	مخول	/məχu:l/	A camel which is aged between six months to one year
29.	مفروء	/məfru:d/	Camel which is aged between one to two years, being totally dependent on herding and drinking
30.	ثني	/ θəni:/	A camel whose aged between five to six years old
31.	حِق	/hɪq/	A male camel which is aged between two and three years old
32.	حقه	/ hɪqəh/	A female camel which is aged between two and three years old
33.	جذع	/dʒiðʕ/	A camel which has completed its fourth year entering the fifth year of its age., and starts to carry luggage
34.	رباع	/rɪbaʕ/	A camel aged between six and seven years old
35.	سدیس	/sudais/	A camel aged between seven and eight years old
36.	فطيم	/fət'i:m/	A camel that is one year old and still breastfeeds from its mother.

37.	بازل	/bazil/	A male camel after entering the ninth year, when its canines come out through the occurrence of tingling
38.	بازله	/baziləh/	A female camel after entering the ninth year, when his canines come out through the occurrence of tingling
39.	هبع	/hubəʃ/	A very young male camel
40.	حيران	/ħairan/	Newborn camel
41.	شارف	/ʃarɪf/	An old camel
42.	بكرة	/bikrəh/	A young female camel
43.	هرش	/ħarʃ/	Old camel
44.	حيران	/ħairan/	a newly born camel
45.	قلوص	/qəlu:sʕ/	An old female camel
46.	علندي	/ʕələndi/	An old camel
47.	مخلول	/məχlu:l/	6 months old camel and starts to drink water

### iii. Terms of camel based on milk production:

No.	Terms	Transcription	Meaning
48.	جضور	/dʒʌdʕu:r/	A camel that produces a lot of butter during her milking
49.	خلفاء	/χəlfəʔ/	A camel that gives milk
50.	شكرة	/ʃəkrəh/	A female camel in which its breast is full of milk
51.	عصوب	/ʕəsʕu:b/	A female camel in which it is difficult to have milk from her
52.	عسوس	/ʕəsʕu:s/	A female camel which does not give milk in front of people
53.	بسوس	/bəsʕu:s/	A female camel which has to be shouted at (like bis bis ) to give some milk
54.	مري	/məri/	A female camel which has a lot of milk
55.	رفود	/rəfu:d/	A female camel from which we can have a full bottle of milk
56.	ضفوف	/dʕəfu:f/	A female camel which can be milked twice
57.	بكيه	/bəkɪ:ʔh/	A female camel which cannot produce milk
58.	دهين	/dahi:n/	A female camel which cannot produce milk
59.	جداء	/dʒədaʔ/	A female camel which stopped giving milk suddenly
60.	وفرة	/wəfrəh/	A female camel that has a good quantity of milk
61.	شول	/ʃaul/	A camel that has less milk
62.	صفي	/sʕafi/	A female camel which has a lot of milk
63.	بركة	/bərəkəh/	It is called the camel that has blessing in terms of milk, price and meat
64.	نحوس	/nəhu:s/	A female camel that does not allow to be milked
65.	نخور	/nəχu:r/	A female camel that does not give milk unless it gets massaged through its nose

66.	حلوب	/həlu:b/	A camel that has milk
67.	شصوص	/ʃəsʕu:sʕ/	A camel that does not have milk
68.	قعود	/qəʕu:d/	A small male camel which is still suckling milk from its mother
69.	دهين	/dəhi:n/	The camel has less milk
70.	مسوح	/məsu:h/	A female camel which gives milk when you wipe her breast without breastfeeding her newborn
71.	مجاهيم	/mədʒahi:m/	A camel that can produce a large quantity of milk
72.	البو	/al bu:ʔ/	A female camel which stopped giving milk suddenly because of the death of her baby

iv. Terms of camel based on drinking water:

No.	Terms	Transcription	Meaning
73.	الغب	/yəb/	A camel that drinks water every two days
74.	الغب الطل	/al yəb al tʕəl/	A camel that goes to drink water from the basin during the day.
75.	ريع	/rubʕ/	A camel that drinks water every three days
76.	الظاهرة	/ðʕahərəh/	A camel that drinks water every day
77.	رفة	/raf'əh/	A camel that drinks at any time
78.	قصيد	/qisʕri:d/	A camel that drinks a small amount of water
79.	عرجاء	/ʕərdʒaʔ/	A camel that drinks water once in the morning and once in the evening
80.	تنديّة	/təndi'əh/	A camel that goes back to the water basin to drink again
81.	سلوف	/səlu:f/	A camel that leads the other camels to the water basin to drink
82.	رقوب	/ruqu:b/	A camel that does not drink water from the basin when it's busy, but watches stealthily
83.	ملحاح	/milhah/	A camel that hardly leaves the water basin place
84.	ميراد	/mērad/	A camel that rushes to get to the water basin
85.	هيام	/hiam/	A thirsty camel
86.	عيوف	/ʕuju:f/	A camel that smells the water, but does not drink often
87.	مقامح	/məqaməh/	A camel that does not drink until it overcomes her pain
88.	رباع	/rəbaʕ/	Camels that drink water every three days
89.	فصيل	/fəs'i:l/	A one year old camel which eats trees and drinks water after being separated from his mother.
90.	هيم	/hi:m/	Camels which are most thirsty, as they are not quenched because of a disease that affects them
91.	هافة	/hafəh/	The camel that thirsts quickly
92.	ملواح	/mɪlwah/	A camel that gets thirsty quickly

v. Terms of camel based on pregnancy, giving birth and breeding

No.	Terms	Transcription	Meaning
93.	معشّر	/muʃʃir/	A female camel in the early stages of pregnancy
94.	لقحة	/ləqhəh/	A female camel which is 4th months pregnant
95.	عشراء	/ʕəʃraʔ/	A female camel which has passed ten months of her pregnancy
96.	حيل	/həil/	Camel that has been pollinated but not necessarily pregnant
97.	قارح	/qarɪh/	Female camel at its first stage of pregnancy
98.	مفاريذ	/məfari:d/	A name given to female camel when the first sign of pregnancy appears on her
99.	هجان	/hidʒan/	A female camel that get pregnant before its time.
100.	عشار	/ʕiʃar/	A female camel that is ten months pregnant
101.	حایل	/hail/	A female camel which is not pregnant
102.	عشرا	/ʕəʃra/	A female camel that gives birth in a period of more than 6 months
103.	خلفة	/χilfah/	A female camel when she gives birth
104.	مقلات	/məqlat/	Female camel that gives birth only once
105.	فاطر	/fatʕr/	An old female camel who gave birth more than 5 times
106.	هياح	/hiadʒ /	A camel stallion ready to breed, known through his meager belly
107.	مسيّر - مجسّر	/musajər/ /mudʒasər/	A female camel ready to breed
108.	وصيلة	/wəsʕi:ləh/	A camel that gives birth seven times, and if the seventh was a male or female, they said, her brother arrived, and she should not be slaughtered, and its benefits are for men not women
109.	مصعد	/məʕʕəd/	A female camel that has delivered its baby before the expected time
110.	حام	/ham/	A camel's stallion
111.	غادر	/χa:dər/	A camel stallion that completed the preparation period to be ready for reproduction, known through its bulging belly
112.	فنيق	/fəni:q/	A camel that fattens for mating and reproduction

339.	مكسر	/məksər/	A camel which has been vaccinated but its vaccine failed

## Conclusion:

The enormity of camel terms in Arabic as lexicalised entity not only reiterate Sapir-Whorf's hypothesis on linguistic relativity but also attest what Boas pointed out that "languages differ in the ways they *routinely* classify experience or divide up the natural and cultural world that humans inhabit" (Duranti 2011, p. 31) The idea of CAMEL for the Arabs is implied by a range of different and etymologically related and/or unrelated words. All of them may or may not share a root or stem but they do make an explicit reference to specifiable relations to one another. The data not only show considerable overlap between the terms but also reveal dialectal differences in their use.

The naming of camel in the Arabic language is an unceasing event. Whether it is the birth, the appearance, the behavior or a novel situation of the camel, it is given a new label. Domestication may also lead to nicknaming the animal by the owner. As Bedouins, living in the Arabian Desert still depend on camels for their existence, they are constantly adding on to the list.

Another relevant cultural practice which contributes to the number of camel terms is the traditional racing competition which is still in practice in the gulf region. However, with the receding democratization of the knowledge of classical Arabic and proliferation of the growth and spread of modern Arabic language and dialects, new vocabularies have surfaced. Consequently, a number of older terms referring to different types of camels have either disappeared or are on the verge of disappearing.
